EXAMINER'S AMENDMENT

1. The drawings were received on September 14, 2007. These drawings are acceptable.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 3, line 3, the word "further" has been deleted; line 5, the term "said fixed time interval" has been changed to "said time interval"; and lines 5-6, the term "said orthogonal channel sequence" has been changed to "a delayed orthogonal channel sequence to said second demodulator means".

In claim 4, line 3, the phrase "pilot filter" has been to "a pilot filter" and line 5, the term "said first spread spectrum signal" has been changed to "said descrambled first spread spectrum signal".

In both claims 6 and 8, the identifier "(Original)" has been changed to "(Currently Amended)" since both claims 6 and 8 have been amended.

In claim 6, line 3, the term "said first demodulated spread spectrum signal" has been changed to "a delayed first demodulated spread spectrum signal".

In line 3 of claims 7, 10 and 12, the term "said fixed time interval" has been changed to "said time interval".

In claim 10, lines 3-4, the term "said orthogonal channel sequence" has been changed to "a delayed orthogonal channel sequence".

In claim 11, lines 1-2, the term "said first demodulated spread spectrum signal" has been changed to "a delayed first demodulated spread spectrum signal".

The non-elected (withdrawn) claims 16-20 have been canceled.

3. The following is an examiner's statement of reasons for allowance: the prior art fails to show or suggest a spread spectrum receiver, an apparatus or a method for receiving multiple spread spectrum signals comprising a first demodulator device for demodulating a first spread spectrum signal of the multiple spread spectrum signals in accordance with a first arrival time and a second demodulator device for demodulating a second spread spectrum signal of the multiple spread spectrum signals in accordance with time interval difference with respect to the first arrival time. Wherein either the first or second demodulator device comprises a descrambler circuit for descrambling the first or second spread spectrum signal in accordance with a pseudorandom noise sequence, a phase adjustment circuit for extracting a pilot signal from the descrambled first or second spread spectrum signal and multiplying the descrambled first or second spread spectrum signal with the pilot signal to generate a phase adjusted signal, and a dechannelization circuit for multiplying the phase adjusted signal by an orthogonal channel sequence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
